Would be helpful to change text size. Would be SUPER helpful to see Outbound packets and Incoming 4V4 or so on (example) to know which side has a loss. Super cool otherwise super cool, works well with Linux networking tools configured into the router. Cool tool to look at a issue instead of jumping into a console.. I looked at updates, wondering "how many new exciting stuff they added since I last time checked half a year ago?", and oh boy, what did I saw? First there is a silence from the devs, no updates, then devs shows up and say "next developement updates will be released as paid DLCs", and then they disappear for another 4 months.

Clearly, development of this game is dead, one way or another.. Welp. The most fan-servicery of all Grisaia saga, every fanboy's dream. But seriously though, the price is a rip-off regarding the missing content, including 6 whole 18+ scenarios, plus all the H-scene from 5 after-story routes and Cocoon of Caprice.

Still, gotta say I love the soundtrack from this installment the most compared to other Grisaia games. World's End, Thanatos the Creator, and cigar&coffee are easily among my personal favorite soundtracks of all time.

I won't downvote it because this game still lives up to Grisaia Trilogy's standard. However, I will only recommend it if you are a fan of Grisaia and you have played or already owned the unrated version. Cannot recommend it over the Denpasoft unrated version otherwise.. Creep and short.... like a midget clown.. My favorite part was any point where the protagonist was wondering, "why are there all these panel locks on doors" and "who even does this?"

More seriously, if you don't like jump scares, you probably won't like this game. A lot of the scary moments rely heavily on spooky music crescendo-ing just for a jump scare. Still, I thoroughly enjoyed it, even when it was cheesy.

The puzzles were very good, generally having the right amount of difficulty without jumping into 'so i need a rubber duck to... do what, exactly?'. The game is not bad, but it is also very short and boring. I finished it in 3 hours! If half the game was not in caves, the game would match the basic version!

In my opinion, Arcania: Fall of Setarrif had the potential to be a good game.. This game may be cheap, but it is not worth it at all.

First of all, the physics in this game are absolutly garbage. Some levels have precision platforming and everytime you fail it it feels super unfair because most of the time you did land it, but you slid into a spike that for some reason has a square hitbox. Also when you move at all, it is basically a set increment. Maybe this wouldn't be a problem, but the amount you move from a quick little tap is way too huge.

I cannot recommend this simply because I know there are free flash games out there with more detail and better controls.

6 in 1? holy crapamoly what a bargain. 6 of the greatest games ever made in 1 cheap♥♥♥♥♥bundle!. Definitely better than the first game.

A fun game that you should play.. PoonMoon brings you another 10 at 10 review; 10 comments in 10 minutes of play.

Those new to my patented format, I review with ten minutes of gameplay look.

#1 It's not card hunter

#2 or Heroes Of MM

#3 Is it possible to die

#4 Is it possible to win

#5 Everything feels very unconnected - my choices don't matter

#6 My actions do not feel visceral, I feel like I am hitting a pillow shaped like a badly formed Unicorn

#7 I don't really care whether I win or lose, I hate my own player characters

#8 Strategy feels very liberal - in a plop way, like a coalition government

#9 It looks nice, but better in the trailer, in real terms - whilst she's pretty, I'd rather play FTL

#10 its free, stop moaning. But also stop being a miser and buy something that is fun to play. A difficult short game where you shoot monsters and move on to next level. 9/10 great memes.. Funniest VR game i've played so far.. I hated the storyline, mostly because pretty much everyone across the board acted like a complete idiot. It was frustrating for sure. But there is a good mix of puzzles and lots of HO scenes, so I don't feel right giving it a thumbs down. It's only infuriating the first time because I had to watch every cutscene to get the achivement. In the future I will skip over everything because the story drives me crazy and the voice acting is grating. Not badly acted, more like I just didn't like the sound of their voice, so your mileage may vary. The animations were a bit weird, too.. Great idea behind the game!

Its fun and challenging.

Also the developer is good at fixing bugs as they are being mentioned.

Worth the money! :)

. At the asking price this is pretty much a must buy for any Vive owner. This remindes me of the Commodore era side scroller shoot em ups. You fly "inwards" instead, but otherwise it's the same concept as games like Delta. The soundtrack is a big plus as well, and fits very well into the game.

There are a few bugs and annoyances, like how you can't see the UI if you crash inside a maze. The control of you ship is a bit "rubbery", like if you had it attached to a rubber band. It takes a bit of getting used to. Those are very minor quips, and there are a lot of games on Steam that shipped in a much worse condition.. I just don't find it fun.
